

**Chapter 4:
Types of Functions**

Quadratic Function

The equation is $y = ax^2$

This U-shape is called parabola and always passes through the origin. It is also symmetrical over the y axis.

The 'a' plays 2 roles:

1) The bigger the value of 'a', the skinnier the parabola gets.

2) If the 'a' is negative, then the parabola opens downwards.

HOW TO GRAPH

$$f(x) = -1x^2$$

x	y
-2	4
-1	1
0	0
1	1
2	4

Quadratic function
Finding the rule from a graph

$$y = ax^2$$

plug in a coordinate (3, -90)

$$x = 3 \text{ and } y = -90$$

$$-90 = a(3)^2$$

$$-90 = 9a$$

$$a = -10$$

Answer: $y = -10x^2$

Word Problems:

Below is the graph of a rocket before launching.

1. Define the variables and find the rule.

x : Time (sec)
 y : Distance (m)
 $y = ax^2$

Functions Booklet page 1-9

- ∴ At what distance is the pilot after 20 seconds?

$$\begin{aligned}
 y &= 10x^2 \\
 &= 10(20)^2 \\
 &= 10(400) = 4000 \text{ m}
 \end{aligned}$$

- ∴ How much time after ejection is the pilot 9000m away from initial point of ejection?

$$\begin{aligned}
 y &= 10x^2 \\
 9000 &= 10x^2 \\
 \frac{9000}{10} &= \frac{10x^2}{10} \\
 \sqrt{900} &= \sqrt{x^2} \\
 x &= 30 \text{ sec}
 \end{aligned}$$

He was 30 sec away

EXPONENTIAL FUNCTION

Real Life Situations:

→ technologies → real estate
 → gold → clothes/shoes

The equation is: $y = a \cdot (c)^x$
 initial price % ↑ or ↓

The graph looks like: 

Note: The exponential function is the shape of a curve and not a line.

HOW TO FIND THE BASE 'C'

↑ 30%	$\frac{30}{100} = 0.30$	↓ 30%	$\frac{30}{100} = 0.30$
DO	$1 + 0.30$	DO	$1 - 0.30$
	1.30		0.70

Doubles means $c = 2$
 Triples means $c = 3$
 Quadruples means $c = 4$

EXPONENTIAL FUNCTION	
Finding the equation $y = ac^x$	
1) ↑ 11%, IV = 20 000\$	$y = 20000(1.11)^x$ $1/100 = 0.11 \quad 1 + 0.11 = 1.11$
2) ↓ 5%, IV = 5 000 lizards	$y = 5000(0.95)^x$ $5/100 = 0.05 \quad 1 - 0.05 = 0.95$
3) ↑ 7%, IV = 1 inhabitant	$y = 1(1.07)^x$ $7/100 = 0.07 \quad 1 + 0.07 = 1.07$
4) ↓ 4%, IV = 50 bacteria	$y = 50(0.96)^x$ $4/100 = 0.04 \quad 1 - 0.04 = 0.96$

Solve for x

If $y = 74.6$, solve for x in the equation

$y = 30(1.2)^x$ Trial & Error

$74.6 = 30(1.2)^x$

$\frac{74.6}{30} = \frac{30}{30}(1.2)^x$

$2.49 = 1.2^x$ $x = 5$

If $y = 13$, Solve for x in the equation

$y = 100(0.6)^x$

$13 = 100(0.6)^x$

$\frac{13}{100} = \frac{100}{100}(0.6)^x$

$0.13 = 0.6^x \rightarrow x = 4$

Word Problems

1. Your hands contain 2000 bacteria. The value doubles per hour. How much bacteria will there be after 5 hours?

$$y = 2000(2)^x$$

x: # of hr
y: # of Bacteri

$$y = 2000(2)^5$$

x^y or
y^x or
64000 BACTERIA

2. In 1990, a house valued 200 000\$ and increased by 7% yearly. How much will it be worth in 1996?

$$y = ac^x$$

$$y = 200000(1.07)^x$$

$$y = 200000(1.07)^6$$

3. An antique car costs 30 000\$ and increases in value by 10% per year. How much was the car worth 3 years ago?

x : # of years

y : Value of car

$$y = 30000(1.1)^x$$

$$y = 30000(1.1)^{-3}$$

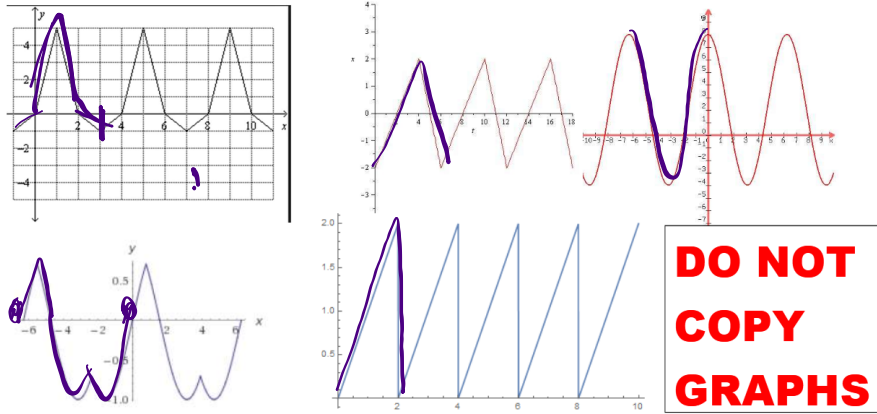

$$22\ 539.44\$$$

5) $C = 1.15$ $\uparrow 15\%$ $C = 0.80$ $\downarrow 20\%$

Functions Booklet page 10-14

Periodic function

A periodic function is a function which always repeats itself.

Copy Graph

cycle

Three terms:

Cycle: it is 1 repetition

Period: how many units it takes for 1 cycle

Frequency: $\frac{1}{\text{PERIOD}}$

$P = 6$

$F = \frac{1}{6}$

$f(x) =$
 $f(0) =$ if x is 0, what is y ? = 2

$f(2) = -2$

$f(5) = 0$

$f(22) = f(2) = -2$

$f(-11) = f(1) =$ Read it 0

$f(17) = f(5) = 0$

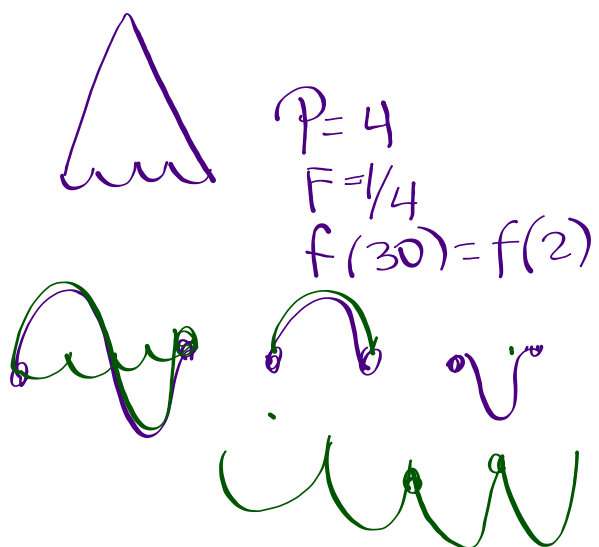

$f(-15) = f(1) = 0$

$-11 + 4 + 4 + \dots$

rip out 17-18-19 on cart

Functions Booklet page 15-27

Step Function

A function that increases or decreases abruptly from one constant value to another.

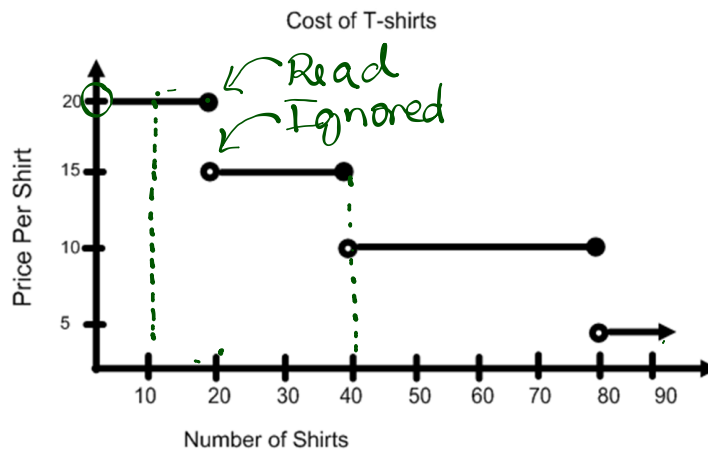

- closed dot include value
- open dot exclude value

Find $f(0)$ meaning when $x = 0, y = 0$

Find $f(10) = 20$

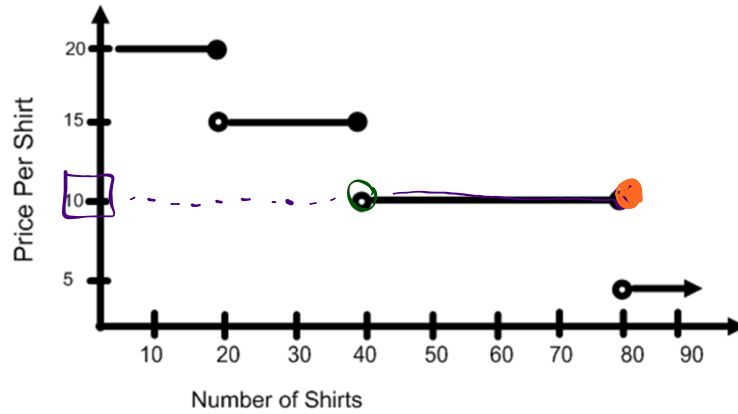

Find $f(40) = 15\$$

Find $f(120) = 5\$$

Find the values of x for which

- a) $f(x) = 10$ $]40, 80]$
 b) $f(x) = 5$ $]80, \infty[$
 c) $f(x) = 15$ $]20, 40]$ Cost of T-shirts

The function has no equation

The graph contains horizontal segments closed on one end and open on the other.

Word Problems:

Talking about parking lots... Did you know about the BMW Welt in Germany?

Youtube:

Discover the BMW Welt - BMW Group
<https://youtu.be/FjM94ZpWib4>

Step
Ex: A parking lot charges 5\$ the first hour or part thereof plus 1\$ every additional hour or part thereof. Make a table of values and then graph. Find the cost of parking for 5 hours.

Word Problems

1. A salesman receives a weekly base salary of 200\$ plus a bonus of 30\$ for every 500\$ in sales made during the week.

a) Make a table of values and graph.

Sales\$	Salary\$
[0, 500[200
[500, 1000[230\$
[1000, 1500[260\$

Handwritten notes: "go by Sales" (with a bracket on the left), "go up by Bonus" (with an arrow pointing to the right).

b) What will his salary be if he makes 946\$ in sales in one week? (use tov)

230\$

c) In which interval lies the amount of sales made in a week where the salesman receives a salary of 290\$? (use tov)

[1500, 2000[

2. Canada Post charges 4\$ for a mass less than 40g and 1.50\$ for each additional 40g. ^{or equal to}

a. Make a table of values and graph.

Mass g	Cost
$]0, 40]$	4\$
$]40, 80]$	5.50\$
$]80, 120]$	7.00\$

b. What is the cost of sending a 168g parcel? (use tov)

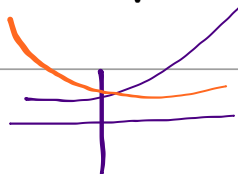

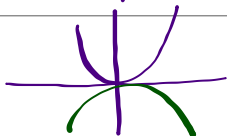

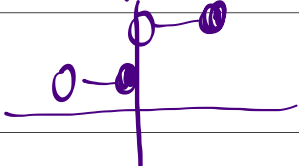

10\$

c. In what interval lies the mass of a parcel if it costs 10\$? (use tov)

$]160, 200]$

pages 1-55

Piecewise Function

\geq greater or =

\leq less than or =

$$f(x) = \begin{cases} 2(1.20)^x & ; 0 \leq x \leq 5 \\ 5 & ; 5 \leq x \leq 8 \\ -2x + 21 & ; 8 \leq x \leq 10.5 \end{cases}$$

Between
Between
Between

Find $f(8.5)$

When $x = 8.5$
what is y .
 $y = -2(8.5) + 21$
 $y = 4$

How to read the graph:

Find $f(0) = 3$
 Find $f(5) = 11$
 Find $f(10) = 8$

Find x when $f(x) = 7$ $\{2, 11\}$
 Find x when $f(x) = 9$ $\{3, 9\}$
 Find x when $f(x) = 3$ $\{0, 15\}$

How to read the equation:

$$f(x) = \left\{ \begin{array}{l} 2x + 3, \quad 0 \leq x \leq 4 \\ 11, \quad 4 \leq x \leq 7 \\ -x + 18, \quad 7 \leq x \leq 18 \end{array} \right\}$$

Between

Do NOT
redraw
graph

Use the equation

Find the y value

$f(10) = 8$

$f(3.5) = 10$

$f(5) = 11$

Find the x value

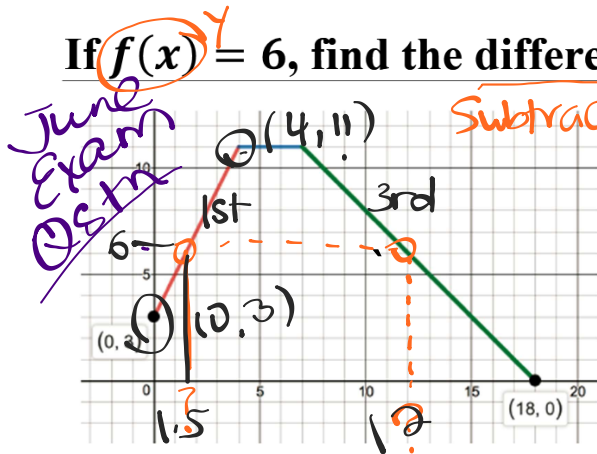

If $f(x) = 5$ find x

$\{1, 13\}$

If $f(x) = 7$ find x

$\{2, 11\}$

If $f(x) = 6$, find the differences in the x values.

Subtract

$$f(x) = \begin{cases} 2x + 3 & , 0 \leq x \leq 4 \\ 11 & , 4 \leq x \leq 7 \\ -x + 18 & , 7 \leq x \leq 18 \end{cases}$$

Do NOT redraw graph/equations

$$y = 2x + 3$$

$$6 = 2x + 3$$

$$\frac{3}{2} = \frac{2x}{2}$$

$$x = 1.5$$

$$y = -x + 18$$

$$6 = -x + 18$$

$$-12 = -x$$

$$x = 12$$

$$12 - 1.5 = 10.5$$

Functions Booklet page 56-78
