

Chapter 4: Linear Equations

The Cartesian Plane (Coordinate system)

The Quadrants are labelled _____

The numbers in an ordered pair such as $(-4, 5)$ are used to locate the position of a point on the grid. The numbers of an ordered pair are called _____.

A _____ is used to represent these coordinates, named by a _____ letter.

A $(-4, 3)$
 ↓ ↓

2X:

Plot the points

A(2,4) D(3,-2)

B(-1,5) E(0,3)

C(-1,-1) F(3,0)

Find slope or rate of change

The slope of a line is a measure of its _____

The bigger the slope, the steeper the line.

If slope is \ominus , line is _____

If slope is \oplus , line is _____

slope formula
$$a = \frac{y_2 - y_1}{x_2 - x_1}$$

* You always need two points which you label as (x_1, y_1)
 (x_2, y_2)

* It doesn't matter which point you choose first.

Find slope

FROM 2 POINTS $(-4, 6)$ $(-8, 10)$

FROM A TABLE OF VALUES

x	1	2	3
y	3	5	7

FROM A GRAPH

Linear Equations

The equation of a line is _____ .

y-intercept: _____

ex: $y = 2x + 3$

$y = -1x - 2$

$y = 3x$

Types of Graphs

1) DIRECT: $y =$

x	
y	

ex:

Bob makes 6\$ per hour.

3) ZERO OR CONSTANT

Bus costs 3\$ no matter where you get off.

2) PARTIAL:

Bob makes 6\$/hr plus a basic fee of 10\$.

4) UNDEFINED

Parameters 'a' and 'b' in $y=ax+b$

Parameter 'a'

$$y=1x+1$$

$$y=2x+1$$

$$y=3x+1$$

conclusion:

Parameter 'b'

$$y=1x+2$$

$$y=1x-3$$

$$y=1x+5$$

Conclusion:

Graphing an EQUATION

Steps 1) Make table of values

2) go by 1 unless there's a fraction.

In that case, go by denominator.

3) Plot the points on TOV & connect.

example 1) $y = 2x + 5$

2) $y = -3x$

3) $y = 5$

5) $y = -\frac{3}{4}x - 2$

4) $x = -2$

Find equation (b'is obvious)

Case 1 (0,40) (10,15)

Case 2

x	0	5	10
y	10	30	50

Case 3

TYPES OF Lines

Direct

$y =$

x	0	1	2
y	0	3	6

* special:

* Bob makes 6\$ per hour

$y =$

Partial

$y =$

x	0	1	2
y	-1	1	3

* Special:

* Bob makes 6\$ per hour plus a basic fee of

10\$

$y =$

~~ZERO~~
OR
Constant

$y =$

x	0	1	2
y	5	5	5

* special:

* Bob makes 6\$ no matter the number of hours worked.

$y =$

MS

Finding the equation (solving for b)

given 2 points?

ex: $(3, 8)$ $(1, 5)$

given a table of values?

ex:

x	11	12	13
y	21	23	25

given a graph?

ex:

Chapter 6: Rational Function.

The equation is $y =$

The graph looks like:

Graphing

Graph $y = \frac{50}{x}$

- Steps
- 1) Make table of values
 - 2) DO NOT choose 0.

Word Problems:

ex: A 1000\$ prize must be shared equally among the employees of a company.

- a) How much will each of the 20 employees obtain?
- b) graph the Rule
- c) If each obtains 10\$, how many employees are there?

ex: The school requires 500 hours of paint job.

- a) find the equation
- b) Draw the graph.

CHAPTER 5: SYSTEM OF EQUATIONS

GRAPHICAL METHOD

Find POI of 2 equations

ex:

$$y = 3x - 6$$

$$y = -2x + 4$$

ex:

$$y = \frac{2}{3}x + 1$$

$$y = -\frac{1}{3}x + 4$$

Comparison Method.

Finding POI of 2 equations

ex: $y = -2x + 4$

$$y = 3x - 6$$

ex: $y = \frac{2}{3}x + 1$

$$y = \frac{1}{3}x + 4$$

ex: $y = \frac{2}{5}x + 5$

$$y = \frac{1}{4}x + 20$$

WORD PROBLEMS

1) Joey is an actor and makes 9\$/hour and a Bonus of 18\$.

Ross is a professor and makes 15\$/hr.

a) Find the 2 equations

b) When will Joey and Ross have the same salary?

c) Who makes more money after 60 hours of work?

2) Two car rental companies are:

Company A charges \$0.30 per kilometer.

Company B charges a base fee of 30\$ plus \$0.20 per kilometer.

a) After how many kilometers will both companies charge the same amount?

b) Which company is the better deal after 500 km?
